Behind with technology?

Let us show you how much fun computers can really be with one of our “totally topical tasters”!!

Digital Photography

Many people now own a digital camera, but are not sure what to do with the images.

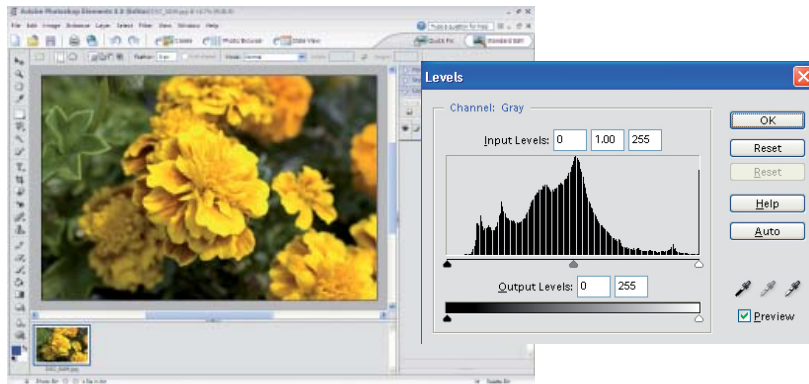

Digital Photography is a fun and informative course for students who want to learn more about getting the most from their digital camera and the basics of image manipulation.

You will learn how to:

- * Download your digital images on to a computer
- * Save using the appropriate image format
- * Enhance your images using Adobe Photoshop Elements, this includes basic re-touching, rotation, cropping, removing red eye, colour correction, levels, cloning techniques and using layers
- * Retouch and restore your old photographs using techniques learned on the course
- * Produce your own finished products, print or send them via e-mail to friends and relatives

The course lasts 7 weeks - 3 hours per week and takes place throughout the year. For more information or to enrol, please contact **Val, Karen** or **Melanie** on:

01924 453502
